

WADDELL Lighting Options

Lighting can be an important factor in effectively displaying your most valued items of pride and achievement. Many Waddell display cases come with optional lighting capability. Check the product listing to determine if lighting is available on your preferred display case.

The following types of lighting are used on the product series indicated:

Halogen Spotlights

Halogen Spotlights are commonly referred to as “Puck Lights” due to their cylinder shape that closely resembles a hockey puck. The 120-volt lights offer a sleek, low profile that provides a targeted lighting option. The Halogen lights provide a high degree of color rendering to better showcase the true colors of your display. These 2-3/8" diameter lights will typically last for over 2,500 hours of usage. Halogen Spotlights utilize a grounded plug and feature an in-line on/off switch.

Halogen Spotlights are used on the following Waddell cases:

- Monarch Series
- Prominence Series
- Prominence Spotlight Series
- Quantum Series
- Varsity Series

Fluorescent Lighting

Traditional fluorescent lights are an energy-efficient choice, giving out the most light per wattage. The 120-volt lights provide an equal overall lighting coverage. Fluorescent lights will typically last for over 10,000 hours of usage. The fluorescent lights utilize a 3-prong grounded plug and feature a top-mounted on/off switch. Fluorescent bulbs not included.

Fluorescent lighting is available for the following Waddell cases:

- Challenger Series
- Colossus Series
- Harbor Series
- Heritage Series
- Merchandiser Series
- Reliant Series

Replacement Lighting

Depending on usage bulbs may occasionally need to be replaced and are therefore not included under warranty. Both Halogen and Fluorescent bulbs are readily available at most hardware, home center, or electrical supply locations.
